# Software Development Internship

**Code UpScale**

Software Development Department | Internee

*July 20, 2026 – September 1, 2026*

**Supervised By:** Usama Mushtaq  
**Submitted By:** Areesha Hameed Khan  
**Roll No.** BSSE23095

# The Internship

## DEPARTMENT & ROLE

**Department:** Software Development

**Position:** Software Development Intern

**Duration:** July 20 – September 1, 2026 (6 weeks)

### Achieved:

- Worked alongside the software engineering team on a company-assigned project in a task-driven development environment.
- Learned the fundamentals of **React** and gained hands-on experience through practical tutorials and development tasks.
- Developed and extended a **full-stack e-commerce platform** for an online jewelry store using the **MERN stack**.

## WHAT I WORKED ON

### Frontend

- Built customer-facing features using **React 19** and **Tailwind CSS**.
- Implemented product catalog, categories, product details, search/filtering, shopping cart, checkout, authentication, and order tracking.

### Backend

- Developed REST APIs using **Node.js** and **Express.js**.
- Used **MongoDB** for storing users, products, and orders.
- Implemented **JWT-based authentication** and admin authentication.
- Integrated **Cloudinary** for product image uploads and storage.
- Deployed the backend using **AWS Elastic Beanstalk**.

# Results & Team

## RESULTS GAINED

- Shipped a working full-stack e-commerce application, deployed live on AWS Elastic Beanstalk ([areesha-co-env.eba-dyurxx2e.ap-south-1.elasticbeanstalk.com](https://areesha-co-env.eba-dyurxx2e.ap-south-1.elasticbeanstalk.com))
- Implemented admin tools for product management (add/edit/list/remove) with image uploads via Cloudinary
- Integrated secure JWT-based authentication with role-gated middleware for customer and admin access
- Built product search, category filtering, cart, and order placement flows end-to-end
- Strengthened practical skills in React, Node/Express, MongoDB, and REST API design through real project work and code review
